C-Square Polymer

FULL SERVICE PLASTIC RECYCLING

Your scrap plastic, back in production.

Innovative & customized circular plastic recycling solutions.

Family owned & operated since 2009.
MBE, SBE and Texas HUB certified.

TOLL SERVICE

C-Square's 6-step toll service

01 Determining work scope

02 Confirming logistics

03 Setting up machine

04 Processing material

05 Testing and sampling

06 Shipment

HOW IT WORKS

Six steps, nothing hidden

1 Determining work scope

Upon receiving a toll service request, we conduct a detailed discussion about client's expectations and work requirement. We will then provide client with a formal rate proposal for review. Once pricing has been agreed on, the client completes a Business Credit Application and submits a W9 for credit approval.

2 Confirming logistics

We confirm the main contact persons for logistics and accounting departments at client's company and exchange initial emails. We will then coordinate with the client to verify paperwork requirement and plan for shipping and delivery.

3 Setting up machine

We conform to any specific changeover requirements and particle specification from the client. Otherwise, we perform and record our standard 25-step machine prep work.

4 Processing material

After client's materials are received and weighed, we begin the size reduction process according to production schedule. We notify client of their first machine run and address any issues or concerns promptly.

5 Testing and sampling

For each box of processed material, we put aside two small sandwich bags of samples for future reference. Each unit is traceable and labelled with converting job item number. We also provide lab testing and sample upon request.

6 Shipment

Once a load is shipped, all required paperwork will be emailed to client's corresponding departments within 48 hours.

PRODUCTS & SERVICES

What we do for you

Cutting

We help clients manage oversized, chunky plastic scrap by cutting and sawing, before putting them into the shredder and grinder for further processing.

Shredding & Grinding

We help clients reduce the size of bulky plastics into granules to be put back into production. We also purchase plastic material and shred/grind in-house then sell to clients per orders.

Pelletizing

We help clients melt down plastics into repro pellets with quality equivalent to virgin pellets for reproduction.

Toll Servicing

We serve as an outsourced processor for plastic manufacturers to turn surplus or off spec products back into the production line as raw materials.

COMPANY PROFILE

We are a full-service plastic recycling company with a vision to enhance the quality of living environment for all. Our expertise lies in the creation of innovative, customized, and sustainable circular plastic recycling systems for our clients through mechanical methods. Located in the heart of Dallas-Fort Worth metroplex, we have been creating values for plastic manufacturers and recyclers in the surrounding areas since 2009. Our core values include respect, kindness, harmony, and truthfulness.
